UNIFORMLY DISTRIBUTED SUPERIMPOSED LOAD IN LBS. PER SQ. FT.

(Includes the live load plus dead load that is in addition to the weight of the grouted slabs in place.)

FOR LOADS & SPANS NOT SHOWN CONTACT MID-STATES CONCRETE INDUSTRIES

HOLLOW CORE: F'c = 9000PSI, WEIGHT = 100 PSF

- 1- Dead Load, 100 psf grouted weight of structural unit.
- 2- Tabulated loads are based on ACI318-14 where $M_u = 1.2 M_d + 1.6 M_L$ and with all loads superimposed on the structural section considered as live load.
- 3- Camber is a result of the design rather than a design requirement. Heavy superimposed loads & / or long spans may cause excessive camber. Contact Mid-States Concrete Industries for more specific camber information.
- 4- Loads shaded in blue are governed by ACI shear section 7.6.3.1. Lower strand pattern shown above reflects shear allowable without added solid at the ends. Higher strand pattern shows capacities that can be developed after two solid voids added at each end for 3 ft. length, at time of casting.
- 5- All strand stressed to 65% of ultimate.
